Mountain Weather Forecast

Brecon Beacons National Park

Forecast valid from 06:00 on Sunday 16 May 2021 until 23:59 on Monday 17 May 2021

Forecast Issued on Sunday 16 May 2021 at 01:14

Confidence: High for the unsettled and showery theme continuing at first. Moderate confidence in the details of showers and their intensities. Moderate for gradually less unsettled weather by the middle of the week, with drier conditions at times. It will however remain cool for the time of year.

Headline for Sunday 16 May 2021: Sunshine and scattered heavy downpours. Risk of thunder and lightning.

Mountain weather hazards on Sunday 16 May 2021

Blizzards No Likelihood	**Heavy Snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** Medium Likelihood
Thunderstorms High Likelihood	**Heavy persistent rain** Low Likelihood	**Strong sunlight** Medium Likelihood

Forecast for Sunday 16 May 2021

Weather: Some showers during the overnight period, perhaps heavy in places. Rather cloudy to begin the day but a few cloud breaks are likely and sunny intervals will develop more extensively through the morning. Showers are possible too and as the cloud bubbles up, the showers will become more widespread and increasingly heavy. Slow-moving heavy downpours are likely during the afternoon, with a risk of hail and thunder, especially around the middle of the afternoon. Fewer showers to end the day with some evening sunshine, especially in the west.

Chance of cloud free mountain/hill tops above 600m: 30-40% through the morning, becoming 80% from midday.

Visibility: Periods of cloud above 550-650m during the overnight hours, lasting for much of the morning. Cloud bases steadily rising through the morning to become occasional periods above 800m. However, even the highest summits will intermittently clear at times through the afternoon. Below the cloud, visibility will often be very good, with distant hills visible at times and excellent air clarity – however expect sudden deteriorations in visibility during showers and abruptly very poor in any bursts of hail.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Many of the showers will be heavy with sudden downpours forming locally and a risk of thunder and lightning occurring without much notice. Hail is also a possibility. Periods of strong sunshine will interrupt the showers, giving moderate to high UV levels at times, so sun protection is recommended if you are planning on spending the whole day in the hills.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Sun 16 May 2021	20.6mm	26.6mm	51mm

Forecast for Monday 17 May 2021

Weather: Showers may form locally during the overnight hours and there will continue to be a risk of heavy showers during the morning and first part of the afternoon. Becoming drier during the afternoon with increasing amounts of sunshine and fewer showers later in the day.

Maximum wind: North-westerly 15-20 mph gusting 25-30 mph at times.

Chance of cloud free mountain/hill tops above 600m: 40% at first, becoming 70% by midday and rising to almost certain through the afternoon.

Visibility: Fairly extensive cloud at first with bases around 600-700m. This will give very poor visibilities during the first part of the day on higher level routes and navigation will be challenging if traversing on any unfamiliar terrain. Cloud bases rising and breaking through the morning to become periods above 800m by midday and lifting above all summits by mid-afternoon. Below the cloud, visibility will once again be very good with distant landmarks clearly visible and excellent air clarity. Temporary deteriorations to a few kilometres as showers pass through.

Temperature: **Valleys:** Plus 4 Celsius rising to plus 14 Celsius
At 600m: Plus 7 Celsius
Freezing level: Above the summits.
